**EDITORIAL NOTE**

In the interest of the board of the Advances in hydroponics and fisheries the executives, I am happy to introduce the Volume 9, Issue 1 of the Journal. Advances in Aquaculture and Fisheries Management is worldwide in context and subsequently draws in research papers that advance logical comprehension in the different exploration subjects essential to hydroponics creation. The Journal set up in 2013 has now distributed 8 issues in a year. The instructive local area contributing novel records on the field of hydroponics. Hydroponics and Fisheries Management is a companion surveyed multidisciplinary diary which thinks about excellent articles for distribution in the parts of hydroponics and fisheries science. This investigation brief summarizes the points of view on freshwater experts on 3 requests: What are the best perils to freshwater resources and how should they shift over the direction of the next century?. Is freshwater science effectively used to help society with changing these threats? How should we ensure the benefits of freshwater science are gathered by society into what's to come? To determine these requests we investigated the current composition and discussed our disclosures in a movement of social occasion get-togethers. We derived that freshwater resources will be for the most part undermined by people improvement, natural change, and eutrophication later on. We give examples of how the use of freshwater science by society is reliant upon convincing checking systems, data sharing, and fruitful correspondence of viable sensible evidence to the two individuals as a rule and technique makers. Upgrades in these fields improve the likelihood of society benefitting with past and future investigation in freshwater science. The journal is offered to the movement of mechanical progressions and responses for huge issues going up against the improvement of overall tank-farming and fisheries science. Papers are picked for

dispersion reliant upon consistent quality and the significance of the data or musings presented, guaranteeing peruses the best information open, to disseminate hypothesis driven papers on applied or consistent assessment material to freshwater tank-farming; salty water hydroponics; and marine hydroponics, including: reproducing and determination in fish cultivating, nourishing and dietary prerequisites in hydroponics, ecological conditions influencing the development of cultivated fish and its impacts of fish cultivating on the oceanic climate too.

Hydroponics and Fisheries Management is proposed for fisheries and hydroponics researchers, fishing gear technologists, financial specialists, directors and strategy creators. The diary distributes hypothetical and common sense papers identifying with research facility and field exploratory investigations on all parts of fisheries and hydroponics. Articles from the instructive local area contributing novel records on the field of hydroponics. Advances in Hydroponics and Fisheries Management is a companion minded open access multidisciplinary journal which ponders extraordinary articles for appropriation in all pieces of aquaculture and fisheries science. The journal is offered to the movement of mechanical progressions and responses for huge issues going up against the advancement of overall aquaculture and fisheries science. Papers are picked for dispersion reliant upon intelligent quality and the importance of the data or contemplations presented, guaranteeing per users the best information open. Journalists of articles conveyed in this journal are the copyright holders of their articles and host permitted to any third assembling, early and in ceaselessness, the choice to use, reproduce or dissipate articles. All articles disseminated by this journal are made uninhibitedly and forever open online rapidly upon circulation, without participation charges or enlistment limits, to disseminate and make open the best worldwide intelligent responsibilities to aquaculture and fisheries science. The journal appropriates disciplinary, interdisciplinary and trans disciplinary aquaculture farming similarly as non-standard coherent areas like acceptability science, social-natural systems.

elaborate, conservation and recovery related to hydroponics, to distribute papers on applied or logical examination applicable to freshwater, bitter, and marine hydroponics. It covers every single oceanic organic entity, floristic and fanatic, related straight forwardly or by implication to human utilization. The diary additionally incorporates survey articles, short correspondences and specialized papers.

are especially urged to submit short interchanges dependent on their own examination. Hydroponics and Fisheries Management is proposed for fisheries and hydroponics researchers, fishing gear technologists, financial experts, directors and strategy creators. The diary distributes hypothetical and common sense papers identifying with research centre and field exploratory examinations on all parts of fisheries and hydroponics.
